

ForestGuard AI - Analysis Report

AI-Powered Forest Monitoring & Risk Detection System

Region Information

Region: Kanha National Park
Risk Level: HIGH
Confidence Score: 92.0%
NDVI: 0.097
Vegetation Loss: 88.0%
Risk Score: 0.88
Generated: 1/8/2026, 11:18:36 pm

Analysis Information

Detection Method: ml
Processing Time: 1.34 seconds
Satellite Source: Sentinel-2

Gemini AI Risk Explanation

Automated assessment classified this region as HIGH risk from a mean NDVI of 0.097 and an estimated 88% vegetation loss. Generated without AI narration.

Recommended Actions

1. Immediately notify the responsible forest authorities.
2. Schedule a field inspection of the affected forest region.
3. Increase satellite monitoring frequency.
4. Compare the latest vegetation data with previous observations.
5. Investigate possible illegal deforestation or vegetation loss.
